PROFESSIONAL SUMMARY

Product-focused architect and Group UI Lead with 14+ years of experience driving frontend modernization, platform scalability, and UI governance across 5 engineering teams. My work focuses on redefining the boundary between frontend applications and backend services through contract-first APIs, SDK-driven development, automated mock generation, and scalable testing strategies. I build systems that enable teams to ship independently, safely, and with long-term maintainability at scale.

CORE COMPETENCIES

Architecture & Governance: Distributed UI Systems, Technical Governance, Monorepos, Design Systems, DevEx Automation

Full-Stack & API Engineering: Java Backends, REST APIs, GraphQL, OpenAPI (OAS3), SDK Design, React/TypeScript Platforms

Testing & Platform Scale: Contract-first Testing Pipelines, Playwright, Vitest, Performance Profiling

WORK HISTORY

Staff Software Engineer (Group UI Lead)

Sep 2021 – Current

Okta

CANADA / REMOTE

- Own end-to-end delivery of business-critical features, authoring comprehensive technical designs (APIs and data models) while executing full-stack implementation to production.
- Direct UI governance across 5 parallel engineering tracks, reviewing UX specifications, coordinating client-server integration with backend teams, and improving delivery predictability.
- Designed and shipped foundational API enhancements, extending existing endpoints and updating OAS3 specifications to minimize runtime integration friction.
- Accelerated enterprise developer velocity by introducing automated testing infrastructures and mentoring senior engineers into Staff tracks.

Senior Software Engineer

Mar 2021 – Jun 2021

Narvar

CANADA / REMOTE

- Designed a fault-tolerant public key sharing solution, establishing secure two-legged authentication paradigms to protect critical client data transactions.

Senior Software Engineer

Mar 2020 – Mar 2021

Samsung Next

TORONTO, ON

- Architected and engineered an integrated fitness and IoT application layer for Samsung Tizen TV, dramatically optimizing low-power hardware media playback, navigation mechanics, and device casting.
- Led cross-functional alignment with Product management to define strict system requirements and automate runtime packaging configuration models across smart TV environments.

Senior Software Engineer

May 2015 – Mar 2020

Deltatre

LONDON / TORONTO

- Architected core components of premium OTT streaming ecosystems (CraveTV) using React, TypeScript, and Haxe to unify playback synchronization across Tizen TV, Fire TV, and Xbox platforms.
- Managed and mentored a global engineering track of 4 developers, institutionalizing modern code health standards, review practices, and robust state-management patterns.
- Integrated telemetry instrumentation setups to analyze user engagement bottlenecks and optimize client rendering efficiency.

Senior Software Engineer

May 2009 – Apr 2015

SAS R&D India Pvt. Ltd.

PUNE, INDIA

- Developed enterprise web applications using Flex and Java backend-for-frontend architectures, transforming design components into reliable product features.
- Established a company-wide library of reusable UI components, enforcing modular asset practices to boost team engineering velocity.
- Engineered real-time server-side push pipelines for dynamic UI dashboard visualizations, removing expensive system polling overhead.

EDUCATION & CERTIFICATIONS

AWS Certified Developer — Associate

Amazon Web Services

BE Computer Science (First Class with Distinction)

M.E.S College of Engineering — Pune, India
